Medical Coding and Narrative Quality

Pharmacovigilance task 3

Objective

To produce traceable coding decisions neutral safety narrative using only the supplied case facts.

Coding narratives

Case id	Product	Reported event	Coding term
PV-101	Velunex	Nausea	Nausea
PV-102	Velunex	Loss of consciousness	Loss of consciousness
PV-103	Velunex	Mild rash	Rash
PV-104	Velunex	Appendicitis	Appendicitis

Case narratives

PV-101

A 34 year old female from India experienced nausea 3 hours after use velunex. The patient recovered. The case was reported as not serious. No concomitant information was reported.

PV-102

A 61 year old male from India experienced loss of consciousness 2 day after use of velunex. The patient was admitted to an emergency hospital and was recovering. Concomitant information was unknown.

PV-103

A 27 year old female from GB experienced a mild rash 4 days after use of velunex. The patient recovered. The case was reported as not serious. No rechallenge was reported.

PV-104

A patient from India experienced appendicitis 3 weeks after use of Velunex. The patient recovered and the case involved hospitalisation. Patient age was not reported and sex was unknown. Medical history was incomplete.

Quality-Control Checklist

☐ Product names normalized

☐ Event terms reviewed

☐ Chronological narratives prepared

☐ Only supplied case facts used

☐ Missing information identified

☐ No unsupported clinical information added

Missing Information

PV-101

• Dose: Not provided

• Route: Not provided

• Indication: Not provided

PV-102

• Dose: Not provided

• Route: Not provided

• Indication: Not provided

• Concomitant information: Unknown

PV-103

• Dose: Not provided

• Route: Not provided

• Indication: Not provided

PV-104

• Patient age: Not reported

• Dose: Not provided

• Route: Not provided

• Indication: Not provided

• Medical history: Incomplete
